Introduction

In response to your request, we are pleased to present this revised proposal for providing geotechnical consultation and construction observation/testing services during the seismic retrofit construction activities at the Historic Alameda High School, located at 2200 Central Avenue in Alameda, California.

Miller Pacific Engineering Group conducted a geotechnical investigation for the project and published a report dated June 20, 2016. The purpose of our construction observation services is to verify that the compaction grouting operation is conducted in accordance with the project specifications, to conduct testing post grouting to verify that the required soil improvement has been achieved, and to observe/test helical piles to verify that the piles are installed in accordance with the approved project specifications and are achieving the required load capacity.

Scope of Services

The contractor has estimated that compaction grouting operations will be underway (typically utilizing two to three grouting crews working simultaneously) for approximately two to three months. In accordance with the DSA approved project specifications, a representative of the Geotechnical Engineer of Record (GEOR) will provide full time observations during the grouting operations. Our representatives will observe the grouting operation, record grout pump pressures and grout takes at each grout point, and sample grout twice daily for slump measurements and compressive strength testing, in accordance with the project specifications. The estimated budget for providing observation of the grouting operations and grout testing is \$270,000.

After the grouting operation is completed, compliance testing will be conducted to verify that the required soil improvement has been achieved. Testing will consist of either Cone Penetration Testing (CPT), and/or Standard Penetration Testing (SPT). In accordance with the approved project specifications, at least eight CPT/SPT tests will be conducted at each of the three

buildings. The estimated budget to complete the verification testing and prepare reports for review by CGS/DSA is approximately \$40,000.

Twelve pre-production helical test piles are planned, in accordance with the project specifications. Our representative will observe the installation of pre-production test helical piles and observe/document the pile load testing operation. Our representative will continuously observe and document the installation of the production piles, as required in the project specifications. The estimated duration (provided by the contractor) for the installation of production piles is approximately three to four weeks. Based on the estimated construction schedule, we estimate a budget of approximately \$46,000 for this phase of construction.

Contractual Arrangements

We will provide our services in accordance with the attached Schedule of Charges. We propose the following fee arrangements:

Geotechnical Consultation, Observation of Grouting Operations, Sampling/Testing of Grout, Post Grouting Compliance Testing, Observation of Test Helical Piles and Load Testing, and Observation of Installation of Production Helical Piles.....Time & Expense, Budget Estimate \$356,000.

We are pleased to have the opportunity to work with you on this project. Please call me if you have any questions concerning this proposal.

Very truly yours,
MILLER PACIFIC ENGINEERING GROUP
